

# Making a Water Bottle Airplane

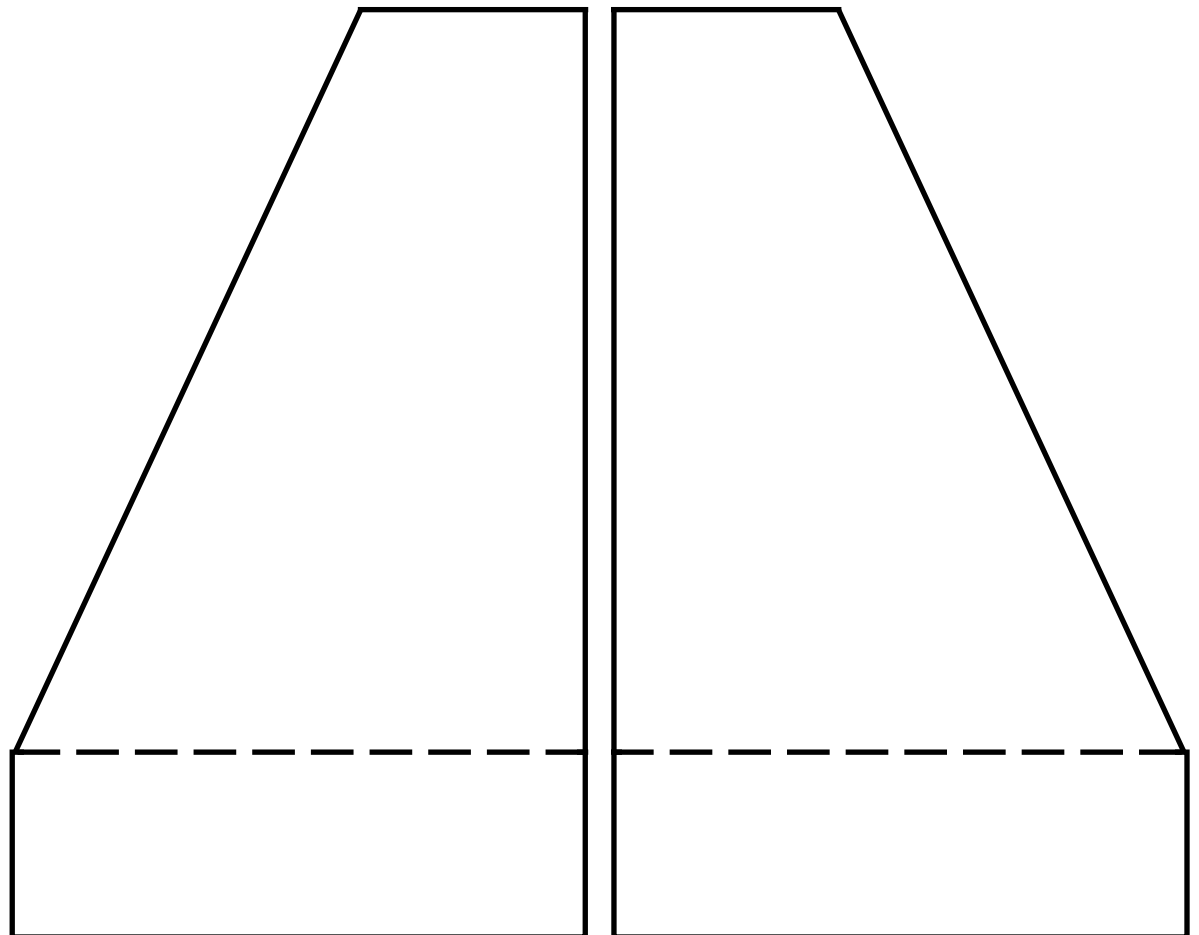

Activity for ages 6+. Adult supervision recommended.

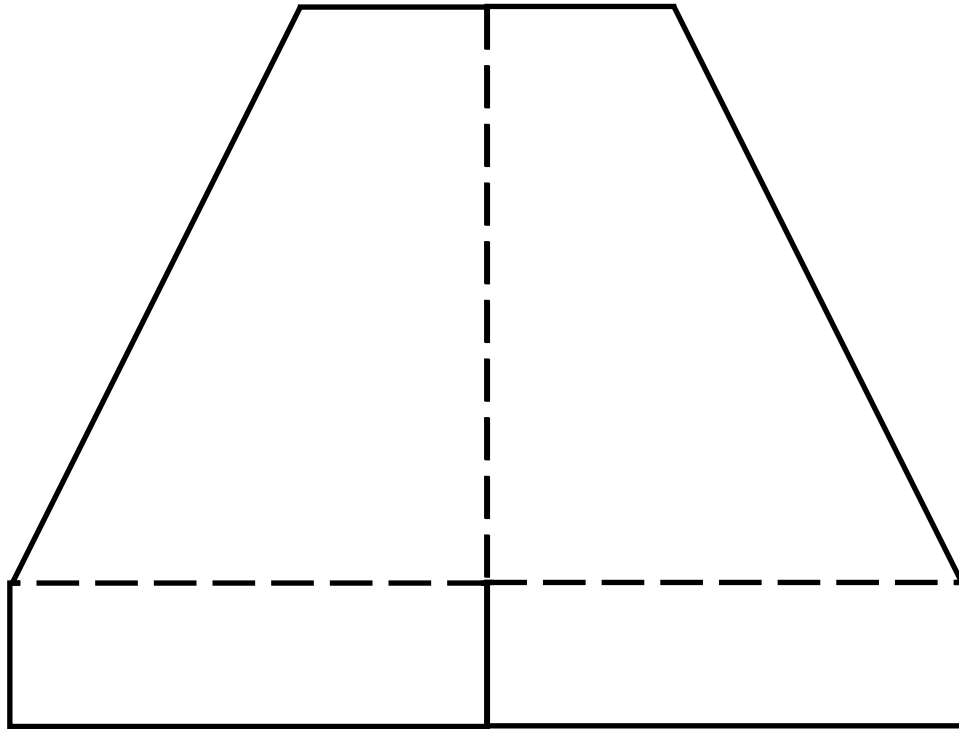

Decorate your plane pieces using **crayons or markers**. With **scissors**, cut out pieces along solid lines (fold along dashed lines) and attach to **water bottle** as shown using **tape**.

## Wings of airplane

*Cut out along solid lines. Fold tabs back at dashed lines and tape one towards the middle of each side of the plane.*

### Rudder of airplane

*Cut out along solid lines—don't forget to cut the small solid line between the two tabs at the bottom. Fold bottom tabs out along horizontal dashed lines. Fold rudder in half along vertical dashed line and tape together. Place rudder on top back of plane and tape tabs down.*

### Propeller of airplane

*Cut out along solid lines. Cut in at small solid line at bottom of propeller and cut out inner circle. Wrap circle of propeller around the neck of the water bottle and tape back together to secure.*
